*SCOTTS Late Blend	10.00 bu.

*SCOTTS MEDIUM BLEND AND LATE BLEND ARE UNIFORM BLENDS OF THREE HYBRIDS IN REGULAR FLAT KERNELS OF THE RESPECTIVE MATURITY GROUPS.

A NUMBER OF CUSTOMERS MIX SEVERAL HYBRIDS TOGETHER OR PUT TWO DIFFERENT HYBRIDS IN THE PLANTER BOXES. THIS HELPS INSURE POLLINATION, REDUCES DROUGHT DAMAGE, GIVES SLIGHT VARIATION IN DRYING, MATURITY, ETC., MAKES MORE CERTAIN A CORN CROP UNDER ADVERSE CONDITIONS AND FREQUENTLY INCREASES YIELDS. THIS IS A COMMON PRACTICE IN PARTS OF THE CORN BELT.

SHIPPING ADDRESS IF DIFFERENT

When Ship ☐ Rail Freight ☐ Express ☐ Parcel Post

How To Order. Kindly include full remittance for prompt delivery. Personal check, bank draft, money order or cash acceptable. Be sure to tell us if your freight station is different from your post office address. Parcel post shipment is more satisfactory on orders under 60 lbs. Please include postage.

Sensible Sam Sez — Be a little careful in buying your Medium Red Clover. Thousands of pounds will be a mixture of Mammoth and Medium and lawfully marked just as "Red Clover." Does the tag say Medium Red? Does germination total 90, including hard seed? Take time to read the tag. Top quality seed won't be offered at bargain prices.

Characteristics Of Improved Alfalfa Varieties

RANGER—Resistant to bacterial wilt, winter hardy, highly recommended for northern alfalfa areas. Continues to produce high yields after wilt susceptible varieties have died out.

BUFFALO—Hardy, wilt resistant variety for central alfalfa region. Recovers rapidly after cutting with same yield advantage as Ranger over wilt susceptible varieties.

ATLANTIC—Vigorous growing, high yielding; has out-yielded other alfalfas during the first and second hay years. Excellent for plow down. Not as winter hardy or wilt resistant as Ranger.

CREEPING ALFALFAS—Rhizoma, Nomad, etc.—Winter hardy, low growing, spreading in type, developed for pasture purposes in low rainfall areas of the northwest. Varieties to date have been susceptible to bacterial wilt so stands are short lived where wilt is a problem. Creeping characteristics largely disappear under Ohio conditions.

VERNAL—Outstanding in wilt resistance and winter hardiness. Fine stemmed and leafy and holds green color longer under adverse conditions. Expected to replace Ranger in northern alfalfa region.

WILLIAMSBURG—Recommended in Virginia and the eastern states because of resistance to black stem. High yields, quick recovery, not wilt resistant.

NARAGANSETT—Similar to Atlantic in yielding ability with some resistance to leaf spot. Susceptible to wilt. Recovers quickly and is top yielding variety in the New England states.

HYBRID CORN

IN QUALITY • YIELD • DISEASE RESISTANCE

1ST

**A
PRIZE
CROP
EVERY
TIME**

Scott
HYBRIDS ARE
CLEAN PICKERS

This is a vigorous growing healthy hybrid that has given excellent yields of sound corn over a wide range of soil and fertility conditions. SCOTTS 66 is one of those dependable hybrids that year after year puts out a good big crib of corn. Dries out early enough to be harvested and out of the way for Wheat.

105 Days Maturity

Scott
HYBRIDS ARE
VIGOROUS
and HEALTHY

Popular as the main corn crop on many farms because its maturity is right for top yields and yet early enough to be harvested before bad weather. SCOTTS 72 has more resistance to stalk rot, blight and other diseases than many hybrids in its class. An excellent crib corn with clean picking, showy ears that are sound for full winter feeding.

110 Days Maturity
